Anisur Khan

Full Stack Software Engineer
Sacramento, CA | anisurk24@gmail.com | (916) 596-8733 | LinkedIn | GitHub | anisurkhan.com

Full Stack Software Engineer with 5+ years building B2B SaaS and integration-heavy platforms in **React, Node.js and Java (Spring)**. Currently own ten production HubSpot integrations end to end, including monitoring and zero-loss data migrations. Previously grew from Software Engineer I to II on a commercial real estate platform, shipping revenue features across Salesforce, QuickBooks and payments.

TECHNICAL SKILLS: JavaScript, TypeScript, React, Angular, Next.js, Node.js, Express, Java (Spring), Python, MongoDB, PostgreSQL, REST and GraphQL APIs, AWS, Docker, HubSpot, Salesforce, QuickBooks

EXPERIENCE:

Senior Full Stack Software Engineer at Hive Strategy | Mar 2026 - Present
Agency syncing school networks' admissions and enrollment records through HubSpot integrations.
Tech: Node.js, HubSpot API and UI extensions (React), NetSuite, SFTP, serverless functions, AWS

- Built **new APIs** and **moved the integration servers to AWS** for faster, more reliable, secure syncs.
- Built **full-stack sync monitoring**: a React banner inside HubSpot backed by a Node.js status API, so failures now surface within the hour instead of when the client complains.
- Migrated **43,700 deals** and cleaned up **3,213 contacts** with **zero records lost**, working around HubSpot's 10,000-record search limit.
- Fixed phone-number formatting that was **rejecting about 6,900 HubSpot updates** on every sync.
- Caught a copied configuration that would have **filed every declined applicant as a won deal** in the client's sales pipeline.

Software Engineer II at CREtelligent | Jun 2022 - Jun 2026
CREtelligent's Radius platform lets commercial real estate lenders and investors order due diligence reports and monitor their property portfolios. Shipped 100+ pull requests across five services.
Tech: React, Angular, TypeScript, Java (Spring), MongoDB, Salesforce, QuickBooks, USAePay, Google Maps

- Led the rebuild of **self-service subscriptions** (React, Java/Spring) so customers could sign up and pay online without going through sales, bringing in **10+ new self-serve customers a month** and **$150K a year in additional revenue**.
- Automated **invoice reconciliation with QuickBooks**, saving accounting **about 15 hours a month**.
- Extended the **Salesforce integration** so proposals, vendor updates and documents synced automatically, **removing manual data entry** without overwriting edits made in Salesforce.
- Kept customers able to view the land they were evaluating after Google retired a mapping library we relied on: **restored the land drawings the same day**, then rebuilt it across **3 services in 4 days**.

Software Engineer I at CREtelligent | Dec 2020 - Jun 2022
Tech: React, Redux, Java (Spring), MongoDB, AWS, Material UI

- Built **team management** end to end (React, Java/Spring) so client companies could onboard their own teams and control which products each person could order.
- Shipped **50+ pull requests** on the order and proposal workflow: bulk pricing and turnaround updates, duplicate-product blocking, and rush and risk filters for the task queue.
- Built the **product catalog** of inspection packages, appraisal reviews and pre-screen reports.

Software Engineer at Hi-Flier (Part-time) | Apr 2020 - Jun 2021
Workflow app that turns business steps (review, approve, sign, pay) into trackable Missions.
Equity-compensated startup role: full-time from launch, then part-time after joining CREtelligent.
Tech: React, Redux, Node.js, Express, GraphQL (Apollo), Firebase, Mailgun

- Rebuilt core product features in **React and Node.js** to match a new design system.
- Built the **REST and GraphQL APIs** behind core features and event-driven workflows.
- Automated **user lifecycle emails** (Mailgun) for invitations, Mission starts and password resets.

EDUCATION:
App Academy, Full Stack Software Engineering (1,500+ hour immersive program)
University of California, Davis, B.S. Biology
